

Sanitation systems and services

In this course we will learn how to apply the systems approach to urban sanitation at different scales, what CWIS is and how this approach influences frameworks and concepts for urban sanitation systems and services. We will look at CWIS case studies, stakeholder involvement, and propose and apply strategies for different urban contexts, and also use the Compendium of Sanitation Systems and Technologies to solve urban sanitation challenges. By the end of the course, you will have a good understanding of the different tools used for data collection and assessment, urban sanitation diagnostic tools and stakeholder analysis. Whether you are a sanitation professional looking to improve access to sanitation services in your community, or a policy maker looking to create more effective sanitation systems, this course will give you the knowledge and skills to succeed.
